I Pay good money for satellite service and weather and traffic should be apart of the service. when I'm several hunderd miles out it is nice to know what is happening up ahead instead of when I'm in the middle of it. Local stations are good for local residences, but is not much help when you're traveling down the road. If nothing else theres safety factors involved here such as trying to find stations which takes youre eyes off the road and the reason for xm was for the freedom of choice I'm opposed to petition 04-160.
